## DESIGN FOR PATHS AND SPACES

Doors are integral components of a spatial concept, they contribute to the appearance of a building. The more freedom of design they can offer architects and planners, the better they fit formally and aesthetically. Schörghuber special doors open up to almost unlimited possibilities. Thanks to their variety of materials and surfaces, colours and equipment variants, they underline the overall architectural concept perfectly.

## INTERFACES WITH STYLE

Schörghuber special doors show character. They are available as wall-integrated solutions, style doors with cassettes or transom elements or in contrasting colours. The construction and design of doors begins with the consultation - the Schörghuber team supports and advises planners and customers from the beginning in order to implement individual solutions for the respective project. No standard products are manufactured, but elements that fit exactly.

- 1 Solid wood framed door with fixed glazing
- 2 Double-leaf highly sound-insulating style door element
- 3 Wallpaper door with HPL surface Schörghuber night black matt, anti-fingerprint
- 4 Room-high fire door with real wood veneer

## ALL FEATURES FROM A SINGLE SOURCE

Whatever the specific requirements of a building project: In each door element, function and features can be combined individually.

# 4

**FIRE PROTECTION CLASSES** and almost unlimited possibilities in terms of features, function and design: Schörghuber special doors reconcile structural specifications and design quality in harmony.

## SUCCESS THROUGH SPECIALISATION

Fire protection was the first function the Schörghuber special doors became known in the beginning of a success story and an elementary contribution to more safety: Fire protection doors can save lives, secure fire compartments and reduce the damage to the building. Schörghuber doors with fire protection function are designed in classifications of at least 30 minutes (T30), 60 (T60) and 90 (T90) minutes up to 2 hours (T120) to prevent flames to penetrate.

In order to reliably fulfil these functions the door leaf, frame, hinges, lock, lever handle and closer are perfectly coordinated and tested as a unit. Schörghuber fire doors can be combined with almost all other functions, whether with smoke-, sound-, burglary-protection or other additional functions.

# Company

„We are down-to-earth, technically versed, and arrived in digitization at an early stage. From the interplay between craftsmanship and high-tech, we gain innovative strength and flexibility. This makes us the leading supplier for special door made of wood.“

Jürgen Ruppel, CEO

1

### ROOTED LOCALLY

Maintaining traditions and developing new ones is one and the same for Schörghuber: the medium-sized company combines craftsmanship with industrial production technology. Know-how and experience sharpen the eye for the requirements of the respective project. The result is tailor-made door solutions that are to be found also beyond the German-speaking countries. Developed and manufactured proudly by over 450 employees at two locations in Bavaria close to Munich.

### OPEN FOR CHANGE

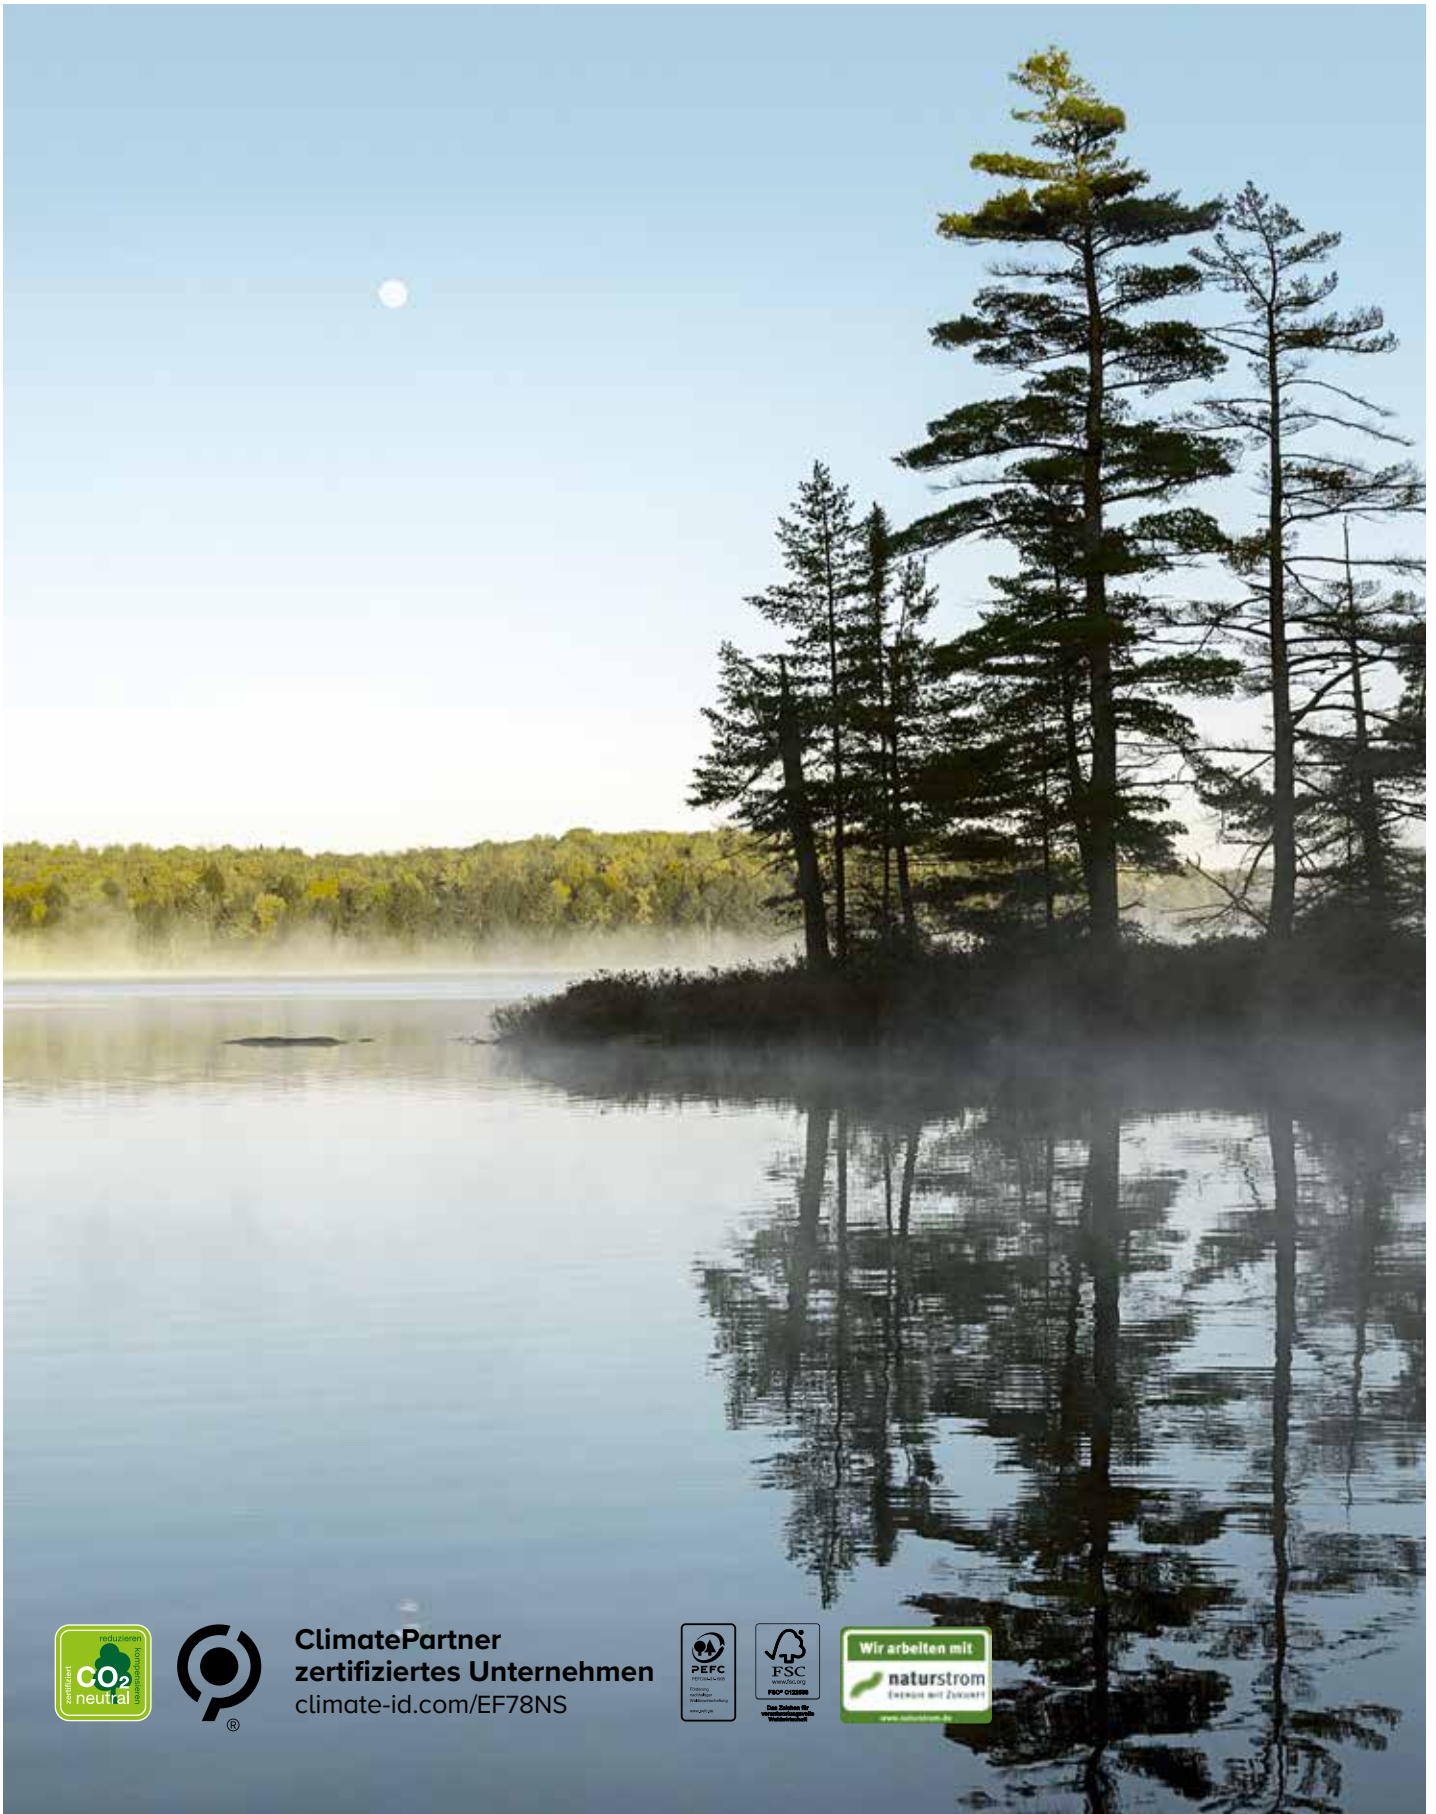

Connecting inside and outside means more than just opening and closing. Just as the demands on living, working and relaxing are changing, new demands are also new requirements for doors. In close cooperation with customers and partners, industry associations and research institutes Schörghuber continues to push the quality standards for special doors made of wood.

# 100

**PERCENT CLIMATE NEUTRAL.** This applies to Schörghuber special doors as a company and for every single door door produced. CO<sub>2</sub> emissions are continuously reduced - and, wherever possible, avoided.

## THINKING FORWARD

For Schörghuber, quality also means sustainability. How can all corporate activities be aligned sustainably and and make a contribution to climate protection?

From regional wood purchasing to the use of sources of renewable energy to offsetting unavoidable CO<sub>2</sub> emissions, the company sees itself responsible: Schörghuber Spezialtüren records its Corporate Carbon Footprint (CCF) on a regular basis. Since 2021, the company has been climate-neutral, and the same applies for every single door manufactured.

Even with the selection of its wood suppliers, Schörghuber supports sustainable forest management. Orders are placed where only wood is harvested as much as will grow back in the forest. The wood raw materials are PEFC or FSC certified. Schörghuber doors meet the strict requirements of approved certification systems.

The production facilities are trimmed for efficient use of materials, energy-saving processes and waste avoidance. Schörghuber uses packaging foils with a recycled content, replaces disposable systems with reusable ones - whether for temporarily used door handles on site or pallets.

Wood residues from production are used to supply the administration building and the production halls with heating and process heat. The entire electricity requirement is covered by green electricity, 100 percent comes from renewable sources.

The testing furnace uses a special smoke filter system ensures that no emissions are released into the environment during the testing of new door types.

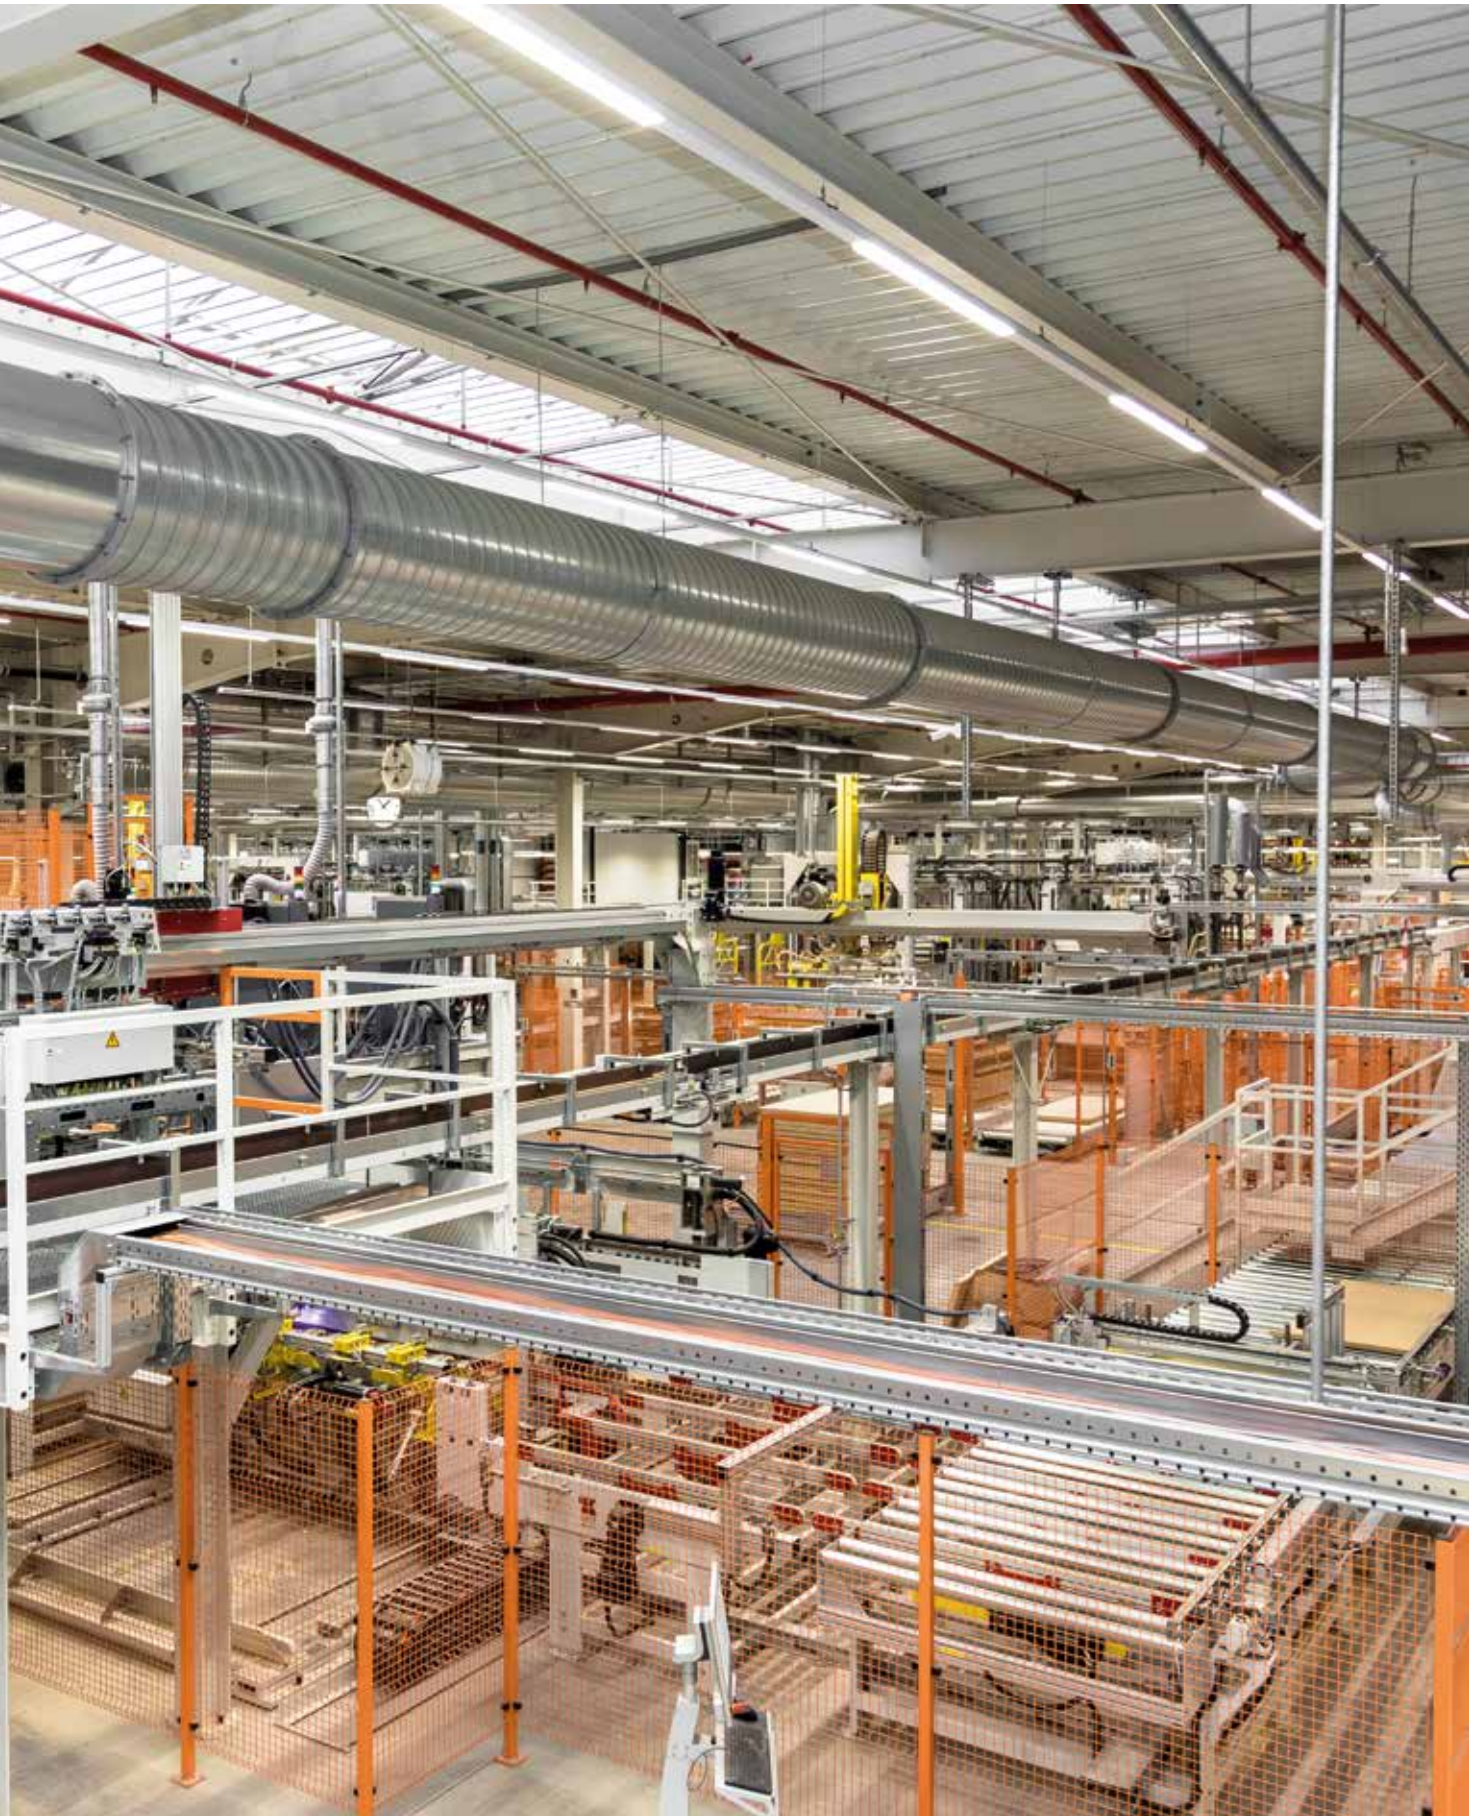

# 100.000

**SQUARE METRES OF PRODUCTION SPACE.** Schörghuber special doors are produced at two locations in Ampfing and Jahrdorf. While a large part of the production space is concentrated in Ampfing with 90,000 m<sup>2</sup>, the plant in Jahrdorf focuses on the processing of solid wood doors.

## **MASSARBEIT**

with a sense of proportion and vision. At Schörghuber, precise craftsmanship and state-of-the-art production work together under the same roof.

# 1858

**STARTED AS A SMALL CARPENTRY WORKSHOP,** Schörghuber soon became known for solving challenging tasks. 1962 Schörghuber achieved a breakthrough with the invention of the wooden fire door. Schörghuber doors quickly became sought-after by architects and building owners.
